

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (Original) A light source apparatus equipped with a GaN type semiconductor light emitting element, comprising

a spatial filter for eliminating stray light from the light emitted from the GaN type semiconductor light emitting element, wherein

said stray light amounts to 20% or less of the total output of the light emitted from said GaN type semiconductor light emitting element when said GaN type semiconductor laser is driven at the maximum output thereof.

2. (Original) A light source apparatus equipped with a GaN type semiconductor light emitting element as defined in claim 1, further comprising

a focusing optical system for focusing the light emitted from the GaN type semiconductor light emitting element, wherein

the spatial filter is formed of a slit panel or a pinhole panel disposed adjacent to the convergence position of the light focused by the focusing optical system.

3. (Original) A light source apparatus equipped with a GaN type semiconductor light emitting element as defined in claim 1, further comprising

a focusing optical system for focusing the light emitted from the GaN type semiconductor light emitting element, wherein

the spatial filter is formed of a partially reflective mirror that partially reflects the light near the convergence position of the light focused by the focusing optical system.

4. (Original) A light source apparatus equipped with a GaN type semiconductor light emitting element as defined in claim 1, wherein

the spatial filter is a polarization element that eliminates the light components other than the TE mode components of the light emitted from the GaN type semiconductor laser.

5. (Previously presented) A light source apparatus equipped with a GaN type semiconductor light emitting element as defined in claim 1, wherein

the stray light is stray light that is generated when the drive current of the GaN type semiconductor light emitting element is less than the laser oscillation threshold value.

6. (Original) A method of eliminating stray light comprising the step of eliminating, by use of a spatial filter, stray light from the light emitted from the light source apparatus equipped with a GaN type semiconductor light emitting element; wherein

said stray light amounts to 20% or less of the total output of the light emitted from said GaN type semiconductor light emitting element when said GaN type semiconductor laser is driven at the maximum output thereof.

7. (Original) A method of eliminating stray light as defined in claim 6, wherein the stray light is stray light that is generated when the drive current of the GaN type semiconductor light emitting element is less than the laser oscillation threshold value.

8 (Currently amended): A device as defined in any one of claims 1 to 5 and 10 to 12,
further comprising an An-image forming apparatus that scans a photosensitive material with a
light modulated based on image data to form the image borne by said image data,~~wherein~~

~~the light source apparatus for emitting said light is the light source apparatus defined in~~
~~any one of claims 1 to 5 and 10 to 12.~~

9 (Currently amended): A device as defined in claim 5, further comprising an An-image
forming apparatus that scans a photosensitive material with a light modulated based on image
data to form the image borne by said image data,~~wherein~~

~~the light source apparatus for emitting said light is the light source apparatus defined in~~
~~claim 5.~~

10. (Previously presented): A light source apparatus equipped with a GaN type
semiconductor light emitting element as defined in claim 2, wherein

the stray light is stray light that is generated when the drive current of the GaN type
semiconductor light emitting element is less than the laser oscillation threshold value.

11. (Previously presented): A light source apparatus equipped with a GaN type
semiconductor light emitting element as defined in claim 3, wherein

the stray light is stray light that is generated when the drive current of the GaN type
semiconductor light emitting element is less than the laser oscillation threshold value.

12. (Previously presented): A light source apparatus equipped with a GaN type
semiconductor light emitting element as defined in claim 4, wherein

the stray light is stray light that is generated when the drive current of the GaN type semiconductor light emitting element is less than the laser oscillation threshold value.

13. (Previously presented): A light source apparatus equipped with a GaN type semiconductor light emitting element as defined in claim 2, wherein a slit width of the slit panel is less than or equal to twice a spot diameter of the light at the convergence position.

14. (Previously presented): A method of eliminating stray light comprising the steps of equipping a light source apparatus with a GaN type semiconductor light emitting element;

providing the light source with a spatial filter; and

eliminating, by use of the stray filter, stray light from the emitted light, wherein

the stray light amounts to 20% or less of the total output of the light emitted from the GaN type semiconductor light emitting element when the GaN type semiconductor laser is driven at the maximum output thereof.

15. (Previously presented): A method of eliminating stray light as defined in claim 14, wherein

the stray light is stray light that is generated when the drive current of the GaN type semiconductor light emitting element is less than the laser oscillation threshold value.

16. (Previously presented): A light source apparatus equipped with a GaN type semiconductor light emitting element as defined in claim 1, wherein

the GaN type semiconductor light emitting element has an active layer having stripe portions, further wherein

the stray light is randomly polarized light emitted from portions of the semiconductor light emitting element other than the stripe portions of the active layer.

17. (Previously presented): A light source apparatus equipped with a GaN type semiconductor light emitting element as defined in claim 16, wherein

the stray light includes light that leaks from the stripe portions of the active layer to portions other than the stripe portions.

18. (Previously presented): A light source apparatus equipped with a GaN type semiconductor light emitting element as defined in claim 2, wherein

the GaN type semiconductor light emitting element has an active layer having stripe portions, further wherein

the stray light is randomly polarized light emitted from portions of the semiconductor light emitting element other than the stripe portions of the active layer, further wherein

the stray light is cutoff by the slit panel.
